SUMMARY

Software Engineer with 4 years of experience engineering scalable backend systems, distributed services, and automation platforms. Focused on high-throughput APIs, event-driven architectures, complex integrations, and production-scale systems, with hands-on experience integrating LLMs, RAG, and AI-powered workflows.

EXPERIENCE

Wizcommerce Bengaluru, India
SDE II Jun 2025 – Present

- Architected Revolut Pay integration, enabling $10M+ annual payment volume through secure, fault-tolerant workflows with webhook-driven state management and idempotent retries using a state machine.
- Refactored payment gateway integration layer by implementing Strategy and Registry design patterns across 10+ payment gateways, onboarding new gateways without core logic changes.
- Designed a multi-tenant ID generation service processing 30,000+ orders/day across 400+ tenants with zero collisions under high- concurrency loads.
- Engineered a customizable payment terms service that supports complex financial workflows with multiple payment methods, handling over 10,000 daily transactions across 400+ tenants with 99.9% accuracy.
- Eliminated a single-cart bottleneck for 400+ enterprise tenants by designing a multi-cart system enabling sales reps to manage parallel order workflows across multiple businesses.

Teamware Solutions | Morgan Stanley Bengaluru, India
Software Engineer Apr 2024 – May 2025

- Built an automated, high-performance vulnerability processing service, reducing time-to-notification latency by 20% and securing100+ enterprise applications through real-time alerting.
- Engineered a content-based deduplication engine using composite key fingerprinting, achieving idempotent processing and eliminating 100% of redundant security alerts.
- Architected a middleware layer for standardized error handling across 250+ REST APIs, ensuring 100% capture of unhandled exceptions and reducing production debugging time by ~30%.

Tata 1mg Gurgaon, India
SDE I Jul 2022 – Mar 2024

- Parallelized inventory, pricing, and SLA validation using asyncio.gather to eliminate sequential blocking calls in the order placement flow, cutting pre-confirmation latency at 1M+ orders/month scale.
- Integrated 3rd-party merchant APIs (eKincare, MediBuddy) by implementing webhook handlers and idempotent event processing, ensuring reliable and seamless service access for end users.
- Designed and deployed an SMS communication service from scratch, including schema design, provider integration, and delivery tracking, enabling automated order status notifications for millions of users.

PROJECTS

ResumeSmith · resumesmith.in | *2026*
Built and deployed ResumeSmith (resumesmith.in), a resume builder with real-time preview and PDF/DOCX export.

SKILLS

AI/GenAI: LLMs, RAG, Embeddings, Vector Search, LangGraph
Languages: Python, Java, C++, SQL
Frameworks: FastAPI, Flask, Django, Pytest
System Design: Microservices, Concurrency, API Design, Event-Driven Architecture
Databases & Messaging: PostgreSQL, MongoDB, Redis, Elasticsearch, Kafka, Vector Databases
Cloud & Developer Tools: AWS(SQS, S3, EC2), Docker, Kubernetes, Git, Bitbucket
Observability & Reliability: Sentry, New Relic, Logging, Metrics

EDUCATION

NIT Jamshedpur Jamshedpur, India
B.Tech, Electronics & Communication Engineering 2018 – 2022
